Exercise #10

Exercise #10

For exercise #10, we will be looking at three applications a trucker might use to do two or more of the following: obtain routing information, manage fuel consumption, find truck stops or truck-friendly rest areas, record Department of Transportation weigh stations, maintain electronic logbooks, etc.

Trucker Path

The first application that helps truckers find information is called Trucker Path. Trucker Path allows truckers to view navigation, truck restrictions, truck stops, weigh stations, truck parking and fuel stations. The Trucker Path application is free on both the Apple Store and the Google Play Store, so it is available for both Apple and Android devices.

Google Maps

The second application that might help a trucker find information is Google Maps. Google Maps is one of the most popular applications, especially for Android users, but it is also available for Apple devices. Google Maps is free on both platforms. Google Maps provides updates on traffic, rest area locations, and provides the route that saves the trucker the most gas.

Hammer

The third and final app is called Hammer. Hammer has a huge database for truck stops, parking availability, and has a listing of diesel prices available. The app is available for both Android and Apple devices for free. Hammer has a lot of positive reviews and over five hundred thousand downloads today.
